

Fractions
Fractions tell us something has been divided into equal parts.

1 The numerator (top number) tells us how many of the parts we have.
2 The denominator (bottom number) tells us the total number of parts in the whole.

One whole can either be an entire thing or a set of things.

Equivalent fractions show the same part of an object or set.

Equivalent Fractions

1	1	1
2	2	2
3	3	3
4	4	4
5	5	5
6	6	6
7	7	7
8	8	8
9	9	9
10	10	10

one, one-half, one-third, one-fourth, one-sixth, one-eighth, one-tenth, one-twelfth, one, one-half, one-third, one-fourth, one-sixth, one-eighth, one-tenth, one-twelfth, whole, halves, thirds, fourths, fifths, sixths, tenths, twelfths

Comparing Fractions

$\frac{1}{2} = \frac{2}{4}$	$\frac{1}{3} = \frac{2}{6}$
$\frac{1}{4} = \frac{2}{8}$	$\frac{1}{6} = \frac{2}{12}$

Visual aids include a number line, a pizza, and a set of egg cups.
